

Induced mutation for genetic improvement of Sorghum is underway with two mutants under advanced yield trials.

- **TAKPS-5** : a sorghum mutant for hurda (green seeds) purpose showed high yield with improved organoleptic properties.
- Another grain mutant, **TRJP 1-5** for rabi season is high yielding with tolerance to charcoal rot disease.

TRJP 1-5: High yielding sorghum mutant
(In collaboration with UAS, Raichur)

TAKPS-5: Hurda sorghum mutant with high sugar content
(In collaboration with PDKV, Akola)
